IES

Lab 2.1 · Technical Specification

Draft measurable requirements in Word with RISE.

Goal	Draft measurable requirements in Word with RISE.
Output	Specification clauses plus a verification checklist.
Time box	Use the Lesson Plan time; stop at the stated module boundary.

Concept and workflow

Frame the engineering question and identify the permitted evidence. Plan the output and acceptance check. Generate with Copilot. Inspect every source, formula, unit and assumption. Verify one result independently. Correct one precise gap, rerun, and save the evidence.

Prompt to use

Act as a specification editor. Use the requirements data. Each shall statement needs a unit and acceptance test.

Engineering boundary

Mark missing limits as not supplied.

Evidence to retain

Specification clauses plus a verification checklist. Save the final prompt, source filenames, one independent check, correction history and reviewer.

Microsoft 365 route and checks

Open https://m365.cloud.microsoft/ and choose the relevant Copilot surface. For agents use https://m365.cloud.microsoft/chat/ and the Agents entry. For SharePoint use https://www.microsoft365.com/launch/sharepoint. Interface labels may vary by tenant.

Acceptance checklist

- Correct source and revision selected
- Output matches the requested format
- Formula, unit or citation independently checked
- Unknowns remain visible
- No invented cause, limit or approval
- Human reviewer and release decision recorded
