Lab 1.1 Copilot onboarding and access check

IES | 10 minutes | LO2, LO3

All records are fictional training data. They describe no actual facility, person or organisation. Values are teaching assumptions, not approved design criteria. Do not use outputs to operate, maintain or approve real equipment.

Inputs and preparation

Open the mock-data folder: access-check.csv, problem-statement.txt. Use prompts.md for copy and paste. Save your reviewed work under outputs. Earlier lab outputs are optional; this folder provides standalone inputs.

Procedure

1. Open Microsoft 365 using your corporate account. Check the account and tenant shown in the profile menu. Open Copilot Chat from the Microsoft 365 app navigation. Do not use a personal account to work around a corporate restriction.

2. Open a blank Word document in your approved work storage. Locate Copilot in the ribbon or chat pane. Paste the complete short text of problem-statement.txt with the prompt below; confirm that a draft appears.

3. Open Excel with a blank workbook saved in your work storage. Locate Copilot and ask it to explain a simple table with columns sample and value. Record whether the pane is available. Repeat an availability check in PowerPoint and Teams.

Lab 1.1 continued

4. In Microsoft 365 Copilot, inspect Agents or the agent store. Find Researcher and Analyst if enabled. Look for New agent. Record each result in access-check.csv; availability and labels depend on the tenant.

5. Open the trainer-provided SharePoint training site and check library access. Do not change permissions. Ask the trainer to record any blocked application, account, licence or policy issue. Keep an access-check record as evidence.

Check before moving on

Each application has a result and an owner for unresolved issues.

Word output preserves 48 and 32 m3/h and does not diagnose pump failure.

Access or source problems

Use approved paired access or the local source files. Record unavailable live capabilities as not executed. If an attachment is not supported, paste the short synthetic text or reference its approved SharePoint copy. Do not use personal accounts to bypass controls.

Lab 1.1 prompts and evidence

Main prompt

Using only the attached fictional PS-17 notes, list two known facts and two missing measurements. Label the response DRAFT FOR REVIEW. Do not infer a root cause.

Verification prompt

Audit the draft against the named source files. List each claim, source location, uncertainty and correction. Recalculate key values independently. Return a revised draft and change log; do not approve the engineering deliverable.

Expected output example

Illustrative teaching example, not a recorded AI run. Access record: Word available; SharePoint edit unavailable; trainer to arrange approved paired access. Brief: flow fell to 32 m3/h; suction pressure is missing. This record is illustrative, not proof of your tenant access.

Retain your evidence

Keep the source versions, prompt, tool, output, corrections, independent checks and reviewer decision. Record any capability or permission test that was not executed. Use templates/prompt-log.csv. Do not publish real workplace data.
