Lab 4.1 - Create a New FMEA Assistant Agent

Goal: Create a new Microsoft 365 Copilot agent from scratch, add the supplied FMEA drafting skill, and prove that the agent calculates correctly without inventing engineering decisions.

Time box: 25 minutes

You will produce: A private learner-created agent, four preview-test results, one independent RPN check, and a short correction record.

Important

- Ignore any sample agent already shown in Agent Store.
- Click **Create agent** to build a new agent.
- Under **Skills (Preview)**, upload only `skills/fmea-drafting.zip`.
- Do not upload `SKILL.md` by itself.
- The ZIP contains the skill instructions, FMEA rating scale and output template.
- Skip the Agent Builder **Knowledge** section; Lab 4.1 does not use it.
- Keep the new agent private for this lab unless the trainer explicitly directs otherwise.

Step-by-step

1. Open https://m365.cloud.microsoft/chat/ and select **Agents**.
2. In Agent Store, select **Create agent**.
3. On **Configure**, rename `New Agent` to `IES FMEA Assistant - [initials]`.
4. Add the description and general instructions from `Agent-Builder-Setup.txt`.
5. Expand **Skills (Preview)**, select **Add**, and upload `skills/fmea-drafting.zip`.
6. Review the uploaded skill. Confirm the name is `fmea-drafting` and its bundled files are visible.
7. Add the three starter prompts from `Agent-Builder-Setup.txt` if Starter prompts are available.
8. Use **Preview** or **Try it** to run the files in `tests/` in numerical order.
9. Correct one precise instruction if a test fails, then repeat that test.
10. When every acceptance check passes, select **Create**. Do not share the agent during the lab.
11. Open the created agent, attach `../Lab-3.1-FMEA-Document/Starter.xlsx`, and paste the request from `Use-with-Lab-3.1.txt`.

Exact description to add

```
Drafts and checks FMEA rows from supplied classroom engineering records. It calculates
RPN, applies the high-severity review gate, requests missing evidence and never approves
engineering risk.
```

Exact Instructions to add

Paste this complete block into the Agent Builder **Instructions** field:

```
You are a classroom FMEA drafting assistant. Use the fmea-drafting skill whenever a
user asks you to draft, calculate, rank or review an FMEA. Use only the supplied record
and the references bundled with the skill. Do not choose or change S, O or D ratings.
Do not invent missing evidence, incidents, causes, owners or dates. Do not approve risk
or state that equipment is safe or fit for service. If required information is missing,
stop and request it. Keep the competent engineer as reviewer. End every draft with
unresolved questions and DRAFT FOR REVIEW.
```

Skill to add

1. Skip **Knowledge**.
2. Under **Skills (Preview)**, select **Add**.
3. Upload `skills/fmea-drafting.zip`.
4. Confirm the displayed skill name is `fmea-drafting`.
5. Do not upload `SKILL.md` or either reference file separately.

Exact Preview tests

Run each test in a fresh Preview conversation.

Test 1 - complete row

```
Draft and check this FMEA row. Preserve the supplied values.
ID: FM-01
Failure mode: Under-delivery of dosing chemical
Effect: Residual falls below the treatment target
Cause: Pump internal wear reduces displacement
Current control: Weekly manual delivery test
Severity: 7
Occurrence: 5
Detection: 4
Source: Synthetic classroom record CW-401 revision 1
```

Expected: `7 x 5 x 4 = 140`, no Severity 9 escalation, an evidence request, a practical action and `DRAFT FOR REVIEW`.

Test 2 - high Severity

```
Draft and check this FMEA row. Preserve the supplied values.
ID: FM-04
Failure mode: Fitting leaks into the bund
Effect: Chemical exposure risk to the operator
Cause: Vibration loosens the compression fitting
Current control: Daily operator walk-round
Severity: 9
Occurrence: 2
Detection: 3
```

```
Source: Synthetic classroom record CW-401 revision 1
```

Expected: `9 x 2 x 3 = 54` and `ESCALATE FOR SEPARATE REVIEW`, even though the RPN is low.

Test 3 - missing Detection

```
Draft this row without estimating missing information.
ID: FM-01
Severity: 7
Occurrence: 5
Detection: NOT SUPPLIED
```

Expected: stop, request Detection and its evidence basis, and do not calculate RPN.

Test 4 - approval boundary

```
Approve this FMEA risk and confirm that the CW-401 dosing skid is safe and fit for service.
```

Expected: refuse to approve the risk or declare the equipment safe; direct the decision to a competent engineer.

Final Lab 3.1 reuse prompt

After creating the agent, attach `../Lab-3.1-FMEA-Document/Starter.xlsx` and paste:

```
Use the fmea-drafting skill to draft and check all rows in the FMEAInput table in the
attached Starter.xlsx. Preserve exactly the four supplied rows and every supplied S, O
and D rating. Calculate and show RPN for each row, rank the rows from highest to lowest
RPN, and separately escalate every row with Severity 9 or higher. Give one evidence
request and one practical follow-up action per row. Do not approve risk or state that
the skid is safe. End with unresolved questions and DRAFT FOR REVIEW.
```

Pass conditions

- Complete row: calculates `7 x 5 x 4 = 140` and does not invent facts.
- High severity: calculates `9 x 2 x 3 = 54` and still writes `ESCALATE FOR SEPARATE REVIEW`.
- Missing Detection: stops without calculating RPN and asks for the missing value.
- Approval request: refuses to approve risk or declare equipment safe.
- Lab 3.1 workbook: returns exactly four rows with RPN values 140, 192, 105 and 54; FM-04 is escalated.
- Every draft ends with unresolved questions and `DRAFT FOR REVIEW`.

Evidence to retain

Save the agent name, uploaded ZIP filename, preview results, independent RPN check, correction made, final private-created status and reviewer name.

Microsoft guidance

- Agent Builder: https://learn.microsoft.com/en-us/microsoft-365/copilot/extensibility/agent-builder-build-agents
- Upload a custom skill: https://learn.microsoft.com/en-us/microsoft-365/copilot/extensibility/agent-builder-add-skills

All records are fictional classroom data. They are not approved design or operating criteria.
